ABSTRACT

The Waste Area Group 5 Remedial Design/Remedial Action has been divided into two phases in an effort to accelerate the schedule for activities taking place at sites described herein. The remedial action is being performed in accordance with the *Final Record of Decision for Power Burst Facility and Auxiliary Reactor Area*. This Work Plan describes the activities that will occur during Phase I of the Remedial Design/Remedial Action. Specifically, Phase I includes the remediation of the Auxiliary Reactor Area (ARA)-02 Sanitary Waste System and the ARA-16 Radionuclide Tank. In addition, four inactive waste system sites (ARA-07, ARA-08, ARA-13, and ARA-21) will either be removed or abandoned in place. Finally, depending on the conditions encountered in the field during the remediation of ARA-16, the ARA-25 contaminated soil site may also be remediated as part of the Phase I activities.
